

Course Description: You are surrounded by a wide variety of structures such as buildings, bridges, and dams. These structures play such an important role in our lives that we cannot ignore them. As a technician, you will need to know this subject well enough to intelligently facilitate communication between designers and construction personnel.

This Applied Mechanics course explores mathematical expressions which have been developed to describe how various elements of structures work. But at the same time every effort is made to link the mathematical expression to structural function. To that end you are encouraged to visually appreciate various structures in your community while understanding the mathematical relationships found in structures.

	This course is the first in the series of courses that leads to MCH212 and ends with CIV225.		
Total Credits:	4		
Hours/Week:	4		
Total Hours:	56		
Prerequisites:	PHY100		
Corequisites:	There are no co-requisites for this course.		
Substitutes:	ARC100, MCH110, PHY118		
This course is a pre-requisite for:	MCH212		
Vocational Learning	4080 - CIVIL ENG TECHNICIAN		
Outcomes (VLO's) addressed in this course:	VLO 1 develop and use strategies to enhance professional growth and ongoing learning in the civil engineering field.		
Please refer to program web page for a complete listing of program	VLO 6 collect, process and interpret technical data to produce written and graphical project-related documents.		
outcomes where applicable.	VLO 7 use industry-specific electronic and digital technologies to support civil engineering projects.		
	VLO 8 participate in the design and modeling phase of civil engineering projects by applying engineering concepts, basic technical mathematics and principles of science to the review and production of project plans.		
	VLO 11 apply teamwork, leadership and interpersonal skills when working individually or within multidisciplinary teams to complete civil engineering projects.

Course Evaluation:	Passing Grade: 50%, D A minimum program GPA of 2.0 or higher where program specific standards exist is required for graduation.		
Other Course Evaluation & Assessment Requirements:	Grade		
Books and Required Resources:	Statics and Mechanics of Materials, 5th Edition by Russell C. Hibbeler Publisher: Pearson ISBN: 9780134382593		
Course Outcomes and Learning Objectives:	Course Outcome 1 Upon successful completion, the student will be able to: 1.Recall and apply basic	Learning Objectives for Course Outcome 11.1 Illustrate with a sketch of a right-angled triangle the accepted method of labeling both the sides and the angles of this triangle.1.2 Recall the six trigonometric functions and apply these to	

trigonometry and measurement units to the study of statics.	simple right-angled triangle problems to solve for the lengths of unknown sides or the magnitude of unknown angles. 1.3 Apply the basic principle known as the Pythagorean Theorem. 1.4 Recall both the sine law and the cosine law and apply these to the solution of triangles which are non-right-angled. Show how the cosine law is related to the Pythagorean Theorem. 1.5 Recall the relationships that exist by way of conversion factors between the S.I. metric and the Imperial system of units for quantities such as length, mass, weight and force. Convert between systems of units using the method of multiplying by ratios equal to one.
Course Outcome 2	Learning Objectives for Course Outcome 2
Upon successful completion, the student will be able to: 2. Solve technical problems by applying principles of statics involving the manipulation of vectors.	 2.1 Define what is meant by a scalar quantity and list at least a dozen examples of scalar quantities. 2.2 Define what is meant by a vector quantity and list seven examples of vector quantities. 2.3 List the various types of forces along with their characteristics and the commonly used units for forces both in the S.I. metric and the Imperial system of units. 2.4 Describe what is meant by the resultant of a system of forces. 2.5 Describe what is meant by the equilibrant of a system of forces. 2.6 Using the method known as the parallelogram method, determine the resultant of two vector quantities using both a graphical and a mathematical approach. 2.7 Using the method known as the string polygon method, determine the resultant of two or more vector quantities using a graphical approach. 2.8 Given a vector quantity superimposed onto an x, y coordinate plane, resolve the vector into its two orthogonal components, namely its x component and its y component. 2.9 Determine the resultant of two or more vector quantities by the analytical method known as the method of components.
Course Outcome 3	Learning Objectives for Course Outcome 3
Upon successful completion, the student will be able to:3.1 Define what is meant by the moment or torque of a about a given point of rotation.3. Solve technical problems by applying principles of statics involving moments about axes caused by single force or a combination of forces3.1 Define what is meant by the moment or torque of a about a given point of rotation. 3.3 Calculate the moment of a force by: i. Multiplying the total force by its perpendicular distance point of rotation, ii. Multiplying each of the forces components by their r perpendicular distances to the point of rotation. 3.4 Determine the resultant moment for a system of m	

	3.5 Name the three factors that together constitute what is known as a3.6 Calculate the moment of a given couple.3.7 Replace a given couple with an equivalent couple at a different location.3.8 Analyze the effects of couples on a body.
Course Outcome 4	Learning Objectives for Course Outcome 4
Upon successful completion, the student will be able to: 4. Solve technical problems by applying principles of statics involving equations of equilibrium and the free body diagram.	 4.1 Write the 3 equations that represent the three requirements that must be met for a body to be in a state of static equilibrium 4.2 Explain what is meant by a free body diagram 4.3 List the assumptions or conventions that one must employ when drawing free body diagrams and replacing supports with equivalent supporting forces. 4.4 Construct a free body diagram for parts or the whole of given mechanisms or structures. 4.5 Differentiate between externally applied loads and internal reactions 4.6 Apply the three conditions of equilibrium to free body diagrams and determine the reactions. 4.7 Describe what is meant by a two force member and explain the implications for a free body diagram involving such members. 4.8 Apply the principles of equilibrium to the solution of problems involving static systems of pulleys. 4.9 Describe what is meant by and solve problems involving coplanar concurrent force systems 4.10 Explain the difference between what is known as a distributed load 4.11 Describe what is meant by and solve problems involving coplanar parallel force systems including both uniform and non-uniform beam loading. 4.12 Describe what is meant by and solve problems involving coplanar, non-concurrent force systems 4.13 Calculate internal member forces
Course Outcome 5	Learning Objectives for Course Outcome 5
Upon successful completion, the student will be able to: 5. Solve technical problems by applying principles of statics involving friction.	 5.1 Write the characteristics that pertain to the force known as the friction force 5.2 Sketch the graph of the friction force versus the applied force when a force is applied to a block, initially at rest, on a horizontal, flat surface. The applied force starts at zero and increases gradually up to and beyond the point where the block begins to slide. 5.3 Indicate clearly the two distinct regions of the graph drawn above, namely, the static region and the kinetic region 5.4 Explain what is meant by the coefficient of friction 5.5 Write the equation for the coefficient of static friction 5.6 Write the equation for the coefficient of kinetic friction 5.7 Explain what is meant by the angle of friction

	 5.8 Write the equation for the angle of friction in terms of the maximum force of static friction and the normal reaction force between the object and the surface upon which it rests. 5.8 Solve a variety of problems involving friction. These problems will include those that require the student to determine whether motion is impending or not. Also, solve those problems that require the student to determine whether tipping or sliding will occur.
