COURSE OUTLINE: ELN213 - ELECTRONIC CIRC II Prepared: Jon Pasiak Approved: Corey Meunier, Chair, Technology and Skilled Trades				
Course Code: Title	ELN213: ELECTRONIC DEVICES AND CIRCUITS II			
Program Number: Name	4026: ELECTRICAL TN-PROC 4029: ELECTRICAL TY-PROCES 4127: ELECTRICAL TN-TRADES			
Department:	ELECT./INSTRUMENTATION PS			
Academic Year:	2023-2024			
Course Description:	This course will introduce several electronic devices and circuits used in industry, with concentration on the Thyristor family of devices. The student will study the devices, their electrical characteristics, and typical industrial applications. Emphasis is placed on the analysis and troubleshooting of circuits, as well as some simplified design. Additionally, students will be required to produce technical reports, demonstrating the ability to document technical data and results in a timely fashion. This course prepares the students for analyzing and troubleshooting circuits and systems in the AC and DC Power Control industrial environment.			
Total Credits:	4			
Hours/Week:	3			
Total Hours:	42			
Prerequisites:	ELN109, ELR109			
Corequisites:	There are no co-requisites for this course.			
This course is a pre-requisite for:	ELR236			
Vocational Learning	4026 - ELECTRICAL TN-PROC			
Outcomes (VLO's) addressed in this course:	VLO 1 Interpret and produce electrical and electronics drawings including other related documents and graphics.			
Please refer to program web page for a complete listing of program outcomes where applicable.	VLO 2 Analyze and solve routine technical problems related to electrical systems by applying mathematics and science principles.			
	VLO 4 Assemble, test, modify and maintain electrical circuits and equipment to fulfill requirements and specifications under the supervision of a qualified person.			
	VLO 6 Verify acceptable functionality and apply troubleshooting techniques for electrical and electronic circuits, components, equipment, and systems under the supervision of a qualified person.			
	4029 - ELECTRICAL TY-PROCES			
	VLO 1 Analyze, interpret, and produce electrical and electronics drawings, technical reports including other related documents and graphics.			
	VLO 2 Analyze and solve complex technical problems related to electrical systems by applying mathematics and science principles.			

SAULT COLLEGE | 443 NORTHERN AVENUE | SAULT STE. MARIE, ON P6B 4J3, CANADA | 705-759-2554

4127 - ELECTRICAL TN-TRADES VL0 1 Interpret and produce electrical and electronic drawings including other related documents and graphics. VL0 2 Analyze and solve routine technical problems related to electrical systems by applying mathematics and science principles. VL0 4 Assemble, test, modify and maintain electrical circuits and equipment to fulfill requirements and specifications under the supervision of a qualified person. Essential Employability VL0 6 Verify acceptable functionality and apply troubleshooting techniques for electrical and electronic circuits, components, equipment, and systems under the supervision of a qualified person. Essential Employability EES 1 Communicate clearly, concisely and correctly in the written, spoken, and visual form that fulfills the purpose and meets the needs of the audience. EES 3 Execute mathematical operations accurately. EES 4 Apply a systematic approach to solve problems. Course Evaluation: Passing Grade: 50%, D Assessment Requirements Student must achieve at least 50% in both the theory and lab components in order to pass the course. Grade Definition Grade Point Equivalent As 90 - 100% 4.00 A 90 - 100% 4.00 A8 90 - 100% 4.00 A 90 - 100% 4.00 A8 90 - 39% 1.00 F(Faily19% and below 0.00 CR (Credit) Credit for diploma requirements has been awarded. 	devices. Perform analysis and testing of circuits employing these device in typical industrial applications.	 Approximately and a state of the systems including (but not limited to) Comparators, Schmitt Triggers, Integrators and Differentiators. Calculate the output characteristics of circuits employing DPAMPS. Describe the operation of, and calculate typical Timing Circuits including (but not limited to) Linear Capacitor Charging and Astable and Monostable Integrated Timer Circuits 4 Describe the operation of various semiconductor and hyristor devices including (but not limited to) common 4-Layer levices. 5 Analyze and solve circuits in AC and DC Power control systems (Single Phase). 6 Correctly select / replace devices in applications based on operational requirements and characteristics. 7 Perform In / Out of circuit testing to determine component unctionality. 		
	Course Outcome 2	Learning Objectives for Course Outcome 2		
	2. Analyze, test and troubleshoot electronic circuits.	 2.1 Accurately analyze the operation of typical industrial circuits employing typical electronic devices outlined. 2.2 Perform simple AC and/or DC calculations of common circuits to determine the operation / functionality. 2.3 Correctly test circuits for functionality, using common and specialized test equipment. 2.4 Correctly and accurately troubleshoot malfunctioning circuits. 		
	Course Outcome 3	Learning Objectives for Course Outcome 3		
	3. Design and modify simple industrial circuits.	3.1 Design simple industrial control circuits employing common devices outlined.3.2 Correctly modify existing circuits for changing operating characteristics and conditions.
