

## I. COURSE DESCRIPTION:

The intention of this course is to introduce the student to a number of fundamental concepts of 'statics' which should prove useful to the aviation technology flight student. The fundamental concepts are very important as they form the basis for other courses in technology such as dynamics, strength of materials and mechanics of fluids. Every effort will be made not to dwell on the theory of these concepts but to instead stress practical applications through the extensive use of problem solving and the presentation of the solutions in a style consistent with standard engineering practice.

## II. LEARNING OUTCOMES AND ELEMENTS OF THE PERFORMANCE:

Upon successful completion of this course, the student will demonstrate the ability to:

## 1. INTRODUCTION

Using the theorems, laws and functions of both right-angle and non right-angle trigonometry, and an understanding of basic algebra and geometry, solve 'force vector' problems.

## Potential Elements of the Performance:

1) Write both a verbal and a mathematical statement of the basic principle known as the Pythagorean theorem.
2) Illustrate with a sketch of a right-angled triangle the accepted method of labeling both the sides and the angles of this triangle.
3) Recall the six trigonometric functions and apply these to simple right-angled triangle problems to solve for the lengths of unknown sides or the magnitude of unknown angles.
4) Recall both the sine law and the cosine law and apply these to the solution of triangles which are non-right-angled. Show that for a right-angled triangle the cosine law reduces to the Pythagorean theorem.
5) Recall the relationships that exist by way of conversion factors between the S.I. metric and the Imperial system of units for quantities such as length, mass, weight and force. Convert between systems of units using the method of multiplying by ratios equal to one.
6) Recall the two main concepts of dimensional analysis that an
algebraic relationship involving quanties must satisfy.
7) Recall the basic rules of geometry involving: intersecting straight lines, supplementary angles, complementary angles, the relationships between angles when a straight line intersects two parallel lines, interior angles of a triangle, similar triangles and the equations for the circumference and the area of a circle.

## 2. VECTOR ANALYSIS

Determine the 'resultants' and the 'equilibrants' of systems of forces both by adding the vector quantities and by adding the vector components.

## Potential Elements of the Performance:

1) Define what is meant by a scalar quantity and list at least a dozen examples of scalar quantities.
2) Define what is meant by a vector quantity and list seven examples of vector quantities.
3) List the various types of forces along with their characteristics and the commonly used units for forces both in the S.I. metric and the Imperial system of units.
4) Describe what is meant by the resultant of a system of forces.
5) Describe what is meant by the equilibrant of a system of forces.
6) Using the method known as the parallelogram method, determine the resultant of two vector quantities using both a graphical and a mathematical approach.
7) Using the method known as the string polygon method, determine the resultant of two or more vector quantities using a graphical approach.
8) Given a vector quantity superimposed onto an $x$-, y-coordinate plane, resolve the vector into its two orthogonal components, namely its $x$-component and its $y$-component.
9) Determine the resultant of two or more vector quantities by the analytical method known as the method of components.

## 3. MOMENTS AND COUPLES

## Determine the 'moment' of a force about a given point and axis of rotation.

## Potential Elements of the Performance:

1) Define what is meant by the moment or torque of a force about a given point of rotation.
2) Write the equation for determining the moment or torque of a force about a given point of rotation.
3) Calculate the moment of a force by:
(a) multiplying the total force by its perpendicular distance to the point of rotation; \&
(b) multiplying each of the force's components by their respective perpendicular distances to the point of rotation.
4) Determine the resultant moment for a system of moments.
5) Name the three factors that together constitute what is known as a 'couple'.
6) Calculate the moment of a given couple.
7) Replace a given couple with an equivalent couple at a different location.
8) Analyze the effects of couples on a body.

## 4. EQUILIBRIUM OF FORCES IN TWO DIMENSIONS

## Apply the "Three Conditions of Equilibrium" to determine unknown forces in various force systems.

## Potential Elements of the Performance:

1) Write the 3 equations that represent the three requirements that must be met for a body to be in a state of 'static equilibrium'.
2) Explain what is meant by a 'free body diagram'.
3) List the assumptions or conventions that one must employ when drawing free body diagrams and replacing supports with equivalent supporting forces.
4) Construct a free body diagram for parts or the whole of given mechanisms or structures.
5) Differentiate between 'externally applied loads' and 'internal reactions'.
6) Apply the three conditions of equilibrium to free body diagrams and determine the reactions.
7) Describe what is meant by a 'two force member' and explain the implications for a free body diagram involving such members.
8) Apply the principles of equilibrium to the solution of problems involving static systems of pulleys.
9) Describe what is meant by and solve problems involving 'coplanar concurrent force systems'.
10) Explain the difference between what is known as a 'concentrated load' and what is known as a 'distributed load'.
11) Describe what is meant by and solve problems involving 'coplanar parallel force systems' including both uniform and nonuniform beam loading.
12) Describe what is meant by and solve problems involving 'coplanar, non-concurrent force systems'.

## 5. STRUCTURES AND MEMBERS

Use the 'method of joints', the 'method of sections' and the 'method of members' to solve for the internal forces in structures such as 'trusses' and 'frames'.

## Potential Elements of the Performance:

1) Recognize the difference between the forces of 'tension' and 'compression' in structural members such as struts and ties.
2) Differentiate between the structures known as 'trusses' and those known as 'frames'.
3) Identify 'members that carry no load' in trusses and frames. Appreciate the importance of identifying such members in the solution of internal forces in structural members such as trusses and frames.
4) Describe what is meant by a 'two-force member' and list the implications that this type of member has on the solution of forces in members of trusses and frames.
5) Describe what is meant by and list the assumptions that apply to, what is known as a 'pin connection' in a truss or a frame.
6) Using the method known as the 'Method of Joints', determine the loads in individual members of coplanar pin-connected trusses and frames being certain to identify whether the members are in tension or compression.
7) Using the method known as the 'Method of Sections' determine the forces in selected members of a truss being certain to identify whether the members are in tension or compression. This will require the drawing of a free body diagram of a 'partial truss' that is part of the entire truss.
8) Describe what is meant by a 'three-force member' and identify clearly the difference between this type of member and the previously used 'two-force member'.
9) Using the method known as the 'Method of Members' determine the forces in members of various mechanisms being certain to identify whether the members are in tension or compression.

## 6. STRUCTURES AND MECHANISMS IN THREE DIMENSIONS

Determine forces and reactions in the members of threedimensional structures.

## Potential Elements of the Performance:

1) Explain what is meant by 'isometric sketching' and use isometric sketching to aid in visualizing forces acting on mechanisms in three dimensions.
2) Construct 'isometric free body diagrams' of the whole, or parts of, three dimensional mechanisms.
3) Apply the six basic equations of three dimensional equilibrium, $\Sigma F_{x}=0, \Sigma F_{y}=0, \Sigma F_{z}=0, \Sigma M_{x}=0, \Sigma M_{y}=0, \Sigma M_{z}=0$, to the three-dimensional systems of:
(a) Parallel forces,
(b) Concurrent forces, \&
(c) Nonconcurrent forces.

## 7. THE LAWS OF FRICTION

## Apply the laws of friction for dry surfaces to flat surfaces to determine if motion is impending and whether tipping or sliding will occur.

## Potential Elements of the Performance:

1) Write the characteristics that pertain to the force known as the 'friction force'.
2) Sketch the graph of the friction force versus the applied force when a force is applied to a block, initially at rest, on a horizontal, flat surface. The applied force starts at zero and increases gradually up to and beyond the point where the block begins to slide.
3) Indicate clearly the two distinct regions of the graph drawn above, namely, the 'static region' and the 'kinetic region'.
4) Explain what is meant by the 'coefficient of friction'.
5) Write the equation for the 'coefficient of static friction'.
6) Write the equation for the 'coefficient of kinetic friction'.
7) Explain what is meant by the 'angle of friction'.
8) Write the equation for the 'angle of friction' in terms of the 'maximum force of static friction' and the 'normal reaction force' between the object and the surface upon which it rests.
9) Solve a variety of problems involving friction. These problems will include those that require the student to determine whether motion is impending or not. Also, solve those problems that require the student to determine whether tipping or sliding will occur.
8. CENTROIDS AND CENTRES OF GRAVITY IN TWO AND THREE DIMENSIONS

Apply the concepts of 'centroids' and 'centre of gravity' to the solution of problems in two and three dimensions.

Potential Elements of the Performance:

1) Explain what is meant by the term 'centroid' of a plane figure or solid object.
2) Explain what is meant by the term 'centre of gravity' of an object.
3) Describe, using an example, a situation where the centroid and the centre of gravity of an object coincide. Be certain to list the two conditions that must be met for this to be true.
4) Describe, using an example, a situation where the centroid and the centre of gravity of an object do not coincide.
5) Locate the centroids of simple areas such as squares, rectangles, triangles, circles, semicircles and quarter circles.
6) Calculate the centroids of composite areas by breaking the composite area into a number of simple areas and using the moments about both the x - and y -axes.

## III. TOPICS:

1. INTRODUCTION

Mathematics of Mechanics
Conversions of Units
2. VECTOR ANAL YSIS

Vector and Scalar Quantities
Forces, Resultants and Equilibrants of force systems
3. MOMENTS AND COUPLES
4. EQUILIBRIUM OF FORCES IN TWO DIMENSIONS

The Three Conditions of Equilibrium
5. STRUCTURES AND MEMBERS

Force Analysis of Structures using the 'Method of Joints', the 'Method of Sections' and the 'Method of Members'.
6. STRUCTURES AND MECHANISMS IN THREE DIMENSIONS

## 7. THE LAWS OF FRICTION

Coefficients of Static and Kinetic Friction

Impending Motion
Sliding versus Tipping Motion
8. CENTROIDS AND CENTRES OF GRAVITY IN TWO AND THREE DIMENSIONS
IV. REQUIRED RESOURCES/TEXTS/MATERIALS:

Textbook ISBN: 9780136077909
Author: Hibbler
Title: $\quad$ Engineering Mechanics - Statics $12^{\text {th }}$ edition
Publisher: Pearson Education
Calculator Scientific (graphics NOT required)

## V. EVALUATION PROCESS/GRADING SYSTEM:

Your final grade in MCH110 will be determined on the basis of three tests to be administered during the semester plus a number of unannounced quizzes and attendance. The marks for the unannounced quizzes and attendance will total $10 \%$. Each test will examine your knowledge of a number of topics presented. The topics covered in each of the three tests are as follows:

> Test \#1 ----- Topic Number I Topic Number II
> Topic Number III
> Test \#2 ----- Topic Number IV Topic Number V Topic Number VI
> Test \#3 ---- Topic Number VII Topic Number VIII

The three tests are of equal weight. (i.e. Each of the three tests is worth $30 \%$ of your final grade.) As a result, provided you have received a passing grade on each of the unit tests, your final grade will simply be the average of your three test results and/or unannounced quiz results and attendance. In order to obtain your letter grade the percentage-letter grade equivalents shown on page 10 will be used. If your final average is below $50 \%$, or if you have received a failing grade in one or more of the unit tests, whether you receive an ' $X$ ' (Incomplete) or an ' $F$ ' (Fai) grade is entirely at the professor's discretion. The decision will be based upon your final average (e.g. 32\% would result in an F grade while $48 \%$ might result in an X grade); your attendance during the semester; your attitude while in the classroom; your perceived level of effort during the semester; etc..
In any case, should you find yourself with an $X$ grade at the end of the semester, in order to upgrade your mark to a passing grade you will be required to write a "make-up" examination covering the entire course content. Should you receive a passing grade on the make-up exam (50\% or higher) your $X$ grade will be upgraded. The best you can do after having received an $X$ grade as a result of a failing average is a C! If you were required to write the make-up examination as a result of having failed one test you may substitute the exam result for this test result.
Prior to administering any test you will be notified a full week in advance. Should you, for any reason (within reason of course), not be able to be in attendance on a day for which the test has been scheduled it is your responsibility to notify the professor prior to the test! If your reasons are acceptable, a date will be set during which you may write a substitute test for the one you have missed.

The following semester grades will be assigned to students:

| Grade | Definition | Grade Point Equivalent |
| :---: | :---: | :---: |
| A+ | 90-100\% | 4.00 |
| A | 80-89\% | 4.00 |
| B | 70-79\% | 3.00 |
| C | 60-69\% | 2.00 |
| D | $50-59 \%$ | 1.00 |
| F (Fail) | 49\% and below | 0.00 |
| CR (Credit) | Credit for diploma requirements has been awarded. |  |
| S | Satisfactory achievement in field /clinical placement or non-graded subject area. |  |
| U | Unsatisfactory achievement in field/clinical placement or non-graded subject area. |  |
| X | A temporary grade limited to situations with extenuating circumstances giving a student additional time to complete the requirements for a course. |  |
| NR | Grade not reported to Registrar's office. |  |
| W | Student has withdrawn from the course without academic penalty. |  |

## VI. SPECIAL NOTES:

## Attendance:

Sault College is committed to student success. There is a direct correlation between academic performance and class attendance; therefore, for the benefit of all its constituents, all students are encouraged to attend all of their scheduled learning and evaluation sessions. This implies arriving on time and remaining for the duration of the scheduled session. Once the classroom door has been closed, the learning process has begun. Late arrivers will not necessarily be granted admission to the room.

MCH110

## Attitude and Conduct specific to the Aviation - Flight Program

Attitude plays an important role in your ability to exercise good judgement. Although attitude is not being graded (except with regard to making a call between granting an ' $X$ ' grade over an ' $F$ ' grade), it affects your ability to learn as well as your safety as a student and future as a professional pilot. Students who display a strong tendency toward any of the five hazardous attitudes pose a grave risk to themselves and others. For this reason these students will be counseled and will be put on a behavioural contract. If counseling is ineffective, then the student will be withdrawn from the program.
The five hazardous attitudes are identified as Anti-authority, Impulsivity, Invulnerability, Machismo and Resignation. These hazardous attitudes are described in "Human Factors for Aviation - Basic Handbook" on pages 151 and 152.

NOTE: The above two paragraphs were taken from the course outline for Flight Operations AVT 377-2. Although more pertinent to an aviation course as such than a course in statics, since the students taking this course are doing so as part of their Aviation - Flight program there is a certain amount of relevance to this course as well!

## VII. COURSE OUTLINE ADDENDUM:

The provisions contained in the addendum located on the portal form part of this course outline.
