

COURSE OUTLINE: ELR104 - ELECTRICAL FUNDAMENT

Prepared: J. Paloniemi, B. Rasheed, R. Braidó

Approved: Greg Mapp, Chair, Aviation Technology - Flight

Course Code: Title	ELR104: ELECTRICAL FUNDAMENTALS					
Program Number: Name	4061: AVIATION TECHNOLOGY					
Department:	ELECT./INSTRUMENTATION PS					
Semesters/Terms:	20W					
Course Description:	The student will learn to explain terminology and devices, draw symbols, and use standard analysis techniques for DC circuits, as they relate to the Aviation Industry. Students will analyze series, parallel and series-parallel DC circuits. Students will explain basic principles of magnetism and magnetic devices, inductors and capacitors, and their principle operation in DC and AC circuits, including phasor diagrams and power factor correction. The student will explain basic principles of Aircraft Batteries, Motors, Generators, and Power distribution systems, with a focus on interpreting Aircraft Electrical System Schematics, as found in Aircraft Manuals.					
Total Credits:	3					
Hours/Week:	3					
Total Hours:	45					
Prerequisites:	AVF111, AVF115, AVF117, AVT119, CMM115, GEN100, MTH612, PHY125					
Corequisites:	There are no co-requisites for this course.					
This course is a pre-requisite for:	AFT130, AVF241, AVF242, AVF245, AVT248, ELN224					
Essential Employability Skills (EES) addressed in this course:	EES 3 Execute mathematical operations accurately. EES 4 Apply a systematic approach to solve problems.					
Course Evaluation:	Passing Grade: 50%, D					
Other Course Evaluation & Assessment Requirements:	The student must earn a passing grade (minimum 40/80) in the Tests portion of the course, to pass the course. A minimum of 95% attendance is required in the lectures to meet ground school requirements.					
Books and Required Resources:	Aircraft Electricity and Electronics by Thomas K. Eismín Publisher: McGraw-Hill Edition: 6 ISBN: 978-0071799157 Scientific Calculator, similar to Sharp EL-520W					
Course Outcomes and Learning Objectives:	<table border="1"> <thead> <tr> <th>Course Outcome 1</th> <th>Learning Objectives for Course Outcome 1</th> </tr> </thead> <tbody> <tr> <td>1. Analyze Series, Parallel and Series-Parallel DC circuits containing voltage and current sources and resistors, to determine</td> <td>1.1 Be able to identify basic circuit components and draw and interpret circuit diagrams. 1.2 Recall and use Ohm's Law, Kirchoff's laws, power formulae and other network Theorems to find the unknown quantities in basic series and parallel circuits.</td> </tr> </tbody> </table>	Course Outcome 1	Learning Objectives for Course Outcome 1	1. Analyze Series, Parallel and Series-Parallel DC circuits containing voltage and current sources and resistors, to determine	1.1 Be able to identify basic circuit components and draw and interpret circuit diagrams. 1.2 Recall and use Ohm's Law, Kirchoff's laws, power formulae and other network Theorems to find the unknown quantities in basic series and parallel circuits.	
Course Outcome 1	Learning Objectives for Course Outcome 1					
1. Analyze Series, Parallel and Series-Parallel DC circuits containing voltage and current sources and resistors, to determine	1.1 Be able to identify basic circuit components and draw and interpret circuit diagrams. 1.2 Recall and use Ohm's Law, Kirchoff's laws, power formulae and other network Theorems to find the unknown quantities in basic series and parallel circuits.					

	individual voltage, current and power values.	1.3 Recall and use the correct network Theorems to simplify and analyze series-parallel combination circuits.
	Course Outcome 2	Learning Objectives for Course Outcome 2
	2. Analyze magnetic properties of circuits and devices.	2.1 Explain magnetic properties of materials. 2.2 Perform calculations relating to flux, flux density, MMF, permeability and reluctance. 2.3 Determine the direction of magnetic flux present as a result of DC current flow in a conductor and in a coil. 2.4 Determine the direction of rotation of a simple dc motor 2.5 Determine the polarity of induced voltage in a simple dc generator 2.6 Complete DC machine diagrams showing flux fields, main fields and rotation
	Course Outcome 3	Learning Objectives for Course Outcome 3
	3. Analyze DC circuits containing inductors or capacitors and resistors	3.1 Explain behavior of resistors and capacitors in RC and RL circuits 3.2 Calculate charge and discharge time, voltage and current values for RL and RC circuits
	Course Outcome 4	Learning Objectives for Course Outcome 4
	4. Analyze AC circuits containing inductors and/or capacitors, to determine circuit impedance, voltage, current, phase angle and power factor.	4.1 Describe characteristics of sinusoidal AC voltages and currents 4.2 Describe relationships between AC voltages and currents in RC, RL and RLC circuits 4.3 Calculate voltages, impedances, currents, and phase angles in AC circuits 4.4 Perform calculations for power factor correction in parallel AC circuits
	Course Outcome 5	Learning Objectives for Course Outcome 5
	5. Describe Aircraft Electrical Systems, and read and interpret schematic drawings.	5.1 Identify schematic symbols for aircraft starters, generators, and related control circuits. 5.2 Trace the flow of current for aircraft starters, generators, and control circuits. 5.3 Explain and label key components in Aircraft Power Distribution Systems 5.3 Explain basic principles of design and maintenance of aircraft electrical systems.

Evaluation Process and Grading System:

Evaluation Type	Evaluation Weight
Assignments and Quizzes	15%
Attendance	5%
Tests	80%

Date: August 1, 2019

Addendum: Please refer to the course outline addendum on the Learning Management System for further information.
