Ends in View	Process					
Upon successful completion of this course, the student will demonstrate the ability to: - describe basic principles, concepts, theoretical frameworks informing community health nursing, - delineate the diversity of roles and functions of						

community health nurses.

- interpret key epidemiological concepts and common epidemiological measurements,
- conduct a community health assessment on an assigned community to identify community health needs for an aggregate, planning appropriate health promotion activities to address priority community health needs,
- describe the health program planning process and its application to nursing in the community,
- summarize models, theories and frameworks of health promotion and community change,
- demonstrate knowledge of strategies for prevention, health protection and health promotion when working with individuals, families, groups, aggregates and communities,
- demonstrate knowledge of environmental health, international health and global health issues as they apply to community health nursing,
- demonstrate knowledge and strategies required to work as a team member,
- prepare a health promotion grant application to address a health need of an aggregate based on the conducted community health assessment.

Active co-operative learning is the philosophical approach in this course. Participants will develop a sense of community health nursing practice and develop social and political awareness in a variety of community contexts by engaging in a variety of learning experiences such as: discussion, debate, case study analysis, health communication development, class presentation, community health assessment, health promotion grant proposal preparation, and critical reflection.
