I. COURSE DESCRIPTION:

This course is designed to provide students with an introduction to the molecules, cells and organs of the immune system. Students will learn how these components of the immune system function together to protect the human body from infectious diseases and cancer. There will also be discussion of the consequences of immune system dysfunction.

II. LEARNING OUTCOMES AND ELEMENTS OF THE PERFORMANCE:

Upon successful completion of this course, the student will demonstrate the ability to: understand the components and functions of the immune system and its role in disease in order to provide better client care in the healthcare setting.

- 1 Students will become familiar with the cells of the immune system. <u>Potential Elements of the Performance:</u>
- Outline the origin and function of the various types of lymphocytes.2 Students will demonstrate knowledge and understanding of the role of the various chemicals used by the immune system.

Potential Elements of the Performance:

Outline the production and function of various chemokines.

3 Students will demonstrate knowledge and understanding of the role of innate immunity in prevention of infection.

Potential Elements of the Performance:

Outline the physical, chemical and physiological barriers and mechanisms used by innate immunity. Define and discuss the functions of the First Line of Defense and the Second Line of Defense. Demonstrate the ability to predict the consequences of failure of this aspect of immunity. Use this knowledge to improve client care.

4 Students will demonstrate knowledge and understanding of the role of adaptive immunity in prevention of disease.

Potential Elements of the Performance:

Outline and discuss the role of B lymphocytes and T lymphocytes. Demonstrate knowledge of the structure and function of antibodies, antigens, and their interactions. Demonstrate knowledge of the structure of T-cells and their role in cell-mediated immune responses. Predict the consequences of failure of this aspect of immunity and use this knowledge to improve client care.

5 Students will demonstrate knowledge and understanding of the roles of tolerance, autoimmunity and hypersensitivity in disease and disorder processes. Potential Elements of the Performance:

Outline how the immune system differentiates between self and non-self. Discuss the consequences of errors in self/non-self discrimination and how this produces various autoimmune diseases. Discuss the production of hypersensitivity states and the consequences of such conditions. Use this knowledge to improve client care.

6 Students will demonstrate knowledge and understanding of the role of immunity in cancer.

Potential Elements of the Performance:

Outline how the immune system is capable of eradicating early stage cancerous cells, and what happens when this system fails. Use this knowledge to improve client care.

7 Students will demonstrate knowledge and understanding of immunodeficiency diseases.

Potential Elements of the Performance:

Outline the generation and outcome of congenital and acquired immunodeficiency diseases. Use this knowledge to improve client care.

III. TOPICS:

- 1. Introduction to the Immune System
- 2. Innate Immunity; The First and Second Lines of Defense: Its Role and Components
- 3. Adaptive Immunity; The Third Line of Defense: Its Role and Components
- 4. Primary and Secondary Cells and Organs of the Immune System
- 5. Antigens
- 6. Adaptive Immune Responses 1: Cell-Mediated
- 7. Adaptive Immune Responses 2: Humoral Immunity
- 8. Tolerance and Autoimmunity
- 9. The Immune System and Cancer
- 10. The Immune System and Transplanted Organs and Tissues
- 11. Hypersensitivity
- 12. Immunodeficiency Diseases
- 13. Vaccines

IV. REQUIRED RESOURCES/TEXTS/MATERIALS:

Geha, R., & Rosen, F. (2012). *Case Studies in Immunology A Clinical Companion, 6e*. Garland Science. ISBN13: 978-08153-4441-4.

V. EVALUATION PROCESS/GRADING SYSTEM:

1. The pass mark for this course is <u>50%</u>. It is composed of assignments, two lecture tests, and a final exam.

2. Evaluation Methods:

| Assignment(s): | 35% |
|-------------------|-----|
| Lecture Tests (2) | 30% |
| Final Exam | 35% |

The lecture tests and final exam will be based on course materials as outlined in the lecture schedule.

3. All written assignments are due at the **beginning** of lecture on their due date. After the lecture has started, all assignments will be considered late and a late penalty will be applied. Late submissions of assignments will have their values reduced at a rate of 10% per day after the due date. After 10 days the assignment will be evaluated as a zero.

- 4. Students missing the term exam or final exam <u>because of illness or other</u> <u>serious reason</u> must contact and inform the professor via SCAAT student email, LMS email, phone or personal note, <u>before</u> the start of the exam (759-2554 ext. 2630). Those students who have notified the professor of their absence, according to policy, will be eligible to arrange an opportunity as soon as possible to write the exam at another time. Those students who <u>do not notify</u> <u>the professor</u> will receive a zero grade for that exam. <u>It is the student's responsibility</u> on his/her first day back at school to contact the professor to arrange to write the exam. Failure to notify the professor at this time will result in a mark of "0".
- 5. Students receiving borderline marks (59, 69, 79, 89) <u>may</u>, at the professor's discretion, have their mark advanced to the next category **if they have attended at least 80% of the classes.**

The following semester grades will be assigned to students in post-secondary courses:

| <u>Grade</u> | Definition | Grade Point Equivalent |
|--------------|--|---------------------------|
| A+ A | 90 – 100% 80 – 89% | 4.00 |
| B | 70 - 79% | 3.00 |
| Ċ | 60 - 69% | 2.00 |
| D | 50 – 59% | 1.00 |
| F (Fail) | 49% and below | 0.00 |
| CR (Credit) | Credit for diploma requirements has been awarded. | |
| S | Satisfactory achievement in field /clinical placement or non-graded subject area. | |
| U | Unsatisfactory achievement in field/clinical placement or non-graded subject area. | |
| Х | A temporary grade limited to situations with extenuating circumstances giving a student additional time to complete the requirements | |
| NR W | for a course. Grade not reported to Registrar's office. Student has withdrawn from the course without academic penalty. | |

Note: For such reasons as program certification or program articulation, certain courses require minimums of greater than 50% and/or have mandatory components to achieve a passing grade.

It is also important to note, that the minimum overall GPA required in order to graduate from a Sault College program remains 2.0.

If a faculty member determines that a student is at risk of not being successful in their academic pursuits and has exhausted all strategies available to faculty, student contact information may be confidentially provided to Student Services in an effort to offer even more assistance with options for success. Any student wishing to restrict the sharing of such information should make their wishes known to the coordinator or faculty member.

VI. SPECIAL NOTES:

Attendance:

Sault College is committed to student success. There is a direct correlation between academic performance and class attendance; therefore, for the benefit of all its constituents, all students are encouraged to attend all of their scheduled learning and evaluation sessions. This implies arriving on time and remaining for the duration of the scheduled session.

VII. COURSE OUTLINE ADDENDUM:

The provisions contained in the addendum located in D2L and on the portal form part of this course outline.
