

Prepared: Mark Allemang Approved: Corey Meunier

Course Code: Title	CAR300: APPLIED RESEARCH PROJECTS	
Program Number: Name	2091: COMPUTER - PROG/ANAL	
Department:	COMPUTER STUDIES	
Semester/Term:	17F	
Course Description:	This course is linked to the colleges Applied Research Centre that brings together Sault Colleges faculty, staff and students and local and regional enterprises to participate in applied research projects that provide real-world solutions to real-world problems, enabling them to create or improve products and services and compete in the global marketplace. Applied research deals with solving real-world problems that usually have direct commercial application. In applied research, activities such as prototype development, feasibility studies, clinical trials, technical consultation and problem solving are often involved. Working on Applied Research Projects will lead the students to help, solve technical problems, adapt new technologies for the marketplace, develop prototypes and new or improved products and processes, enhance products, processes, and / or services, test/evaluate and perform proof of concept study, undergo incremental and larger-scale innovation.	
Total Credits:	5	
Hours/Week:	3	
Total Hours:	45	
Prerequisites:	CSD221	
Essential Employability Skills (EES):	#1. Communicate clearly, concisely and correctly in the written, spoken, and visual form that fulfills the purpose and meets the needs of the audience.  #2. Respond to written, spoken, or visual messages in a manner that ensures effective communication.  #3. Execute mathematical operations accurately.  #4. Apply a systematic approach to solve problems.  #5. Use a variety of thinking skills to anticipate and solve problems.  #6. Locate, select, organize, and document information using appropriate technology and information systems.  #7. Analyze, evaluate, and apply relevant information from a variety of sources.  #8. Show respect for the diverse opinions, values, belief systems, and contributions of others.  #9. Interact with others in groups or teams that contribute to effective working relationships and the achievement of goals.	

Prepared: Mark Allemang Approved: Corey Meunier

#10. Manage the use of time and other resources to complete projects. #11. Take responsibility for ones own actions, decisions, and consequences.

Course Evaluation:

Passing Grade: 50%, D

Other Course Evaluation & Assessment Requirements: Grade

**Definition Grade Point Equivalent** 

A+ 90 - 100% 4.00

A 80 - 89%

B 70 - 79% 3.00

C 60 - 69% 2.00

D 50 - 59% 1.00

F (Fail) 49% and below 0.00

CR (Credit) Credit for diploma requirements has been awarded.

S Satisfactory achievement in field /clinical placement or non-graded subject area. U Unsatisfactory achievement in field/clinical placement or non-graded subject area.

X A temporary grade limited to situations with extenuating circumstances giving a student

additional time to complete the requirements for a course.

NR Grade not reported to Registrar's office.

W Student has withdrawn from the course without academic penalty.

#### **Evaluation Process and Grading System:**

Evaluation Type	Evaluation Weight
Project Execution	15%
Project Presentation	15%
Project Proposal	10%
Project Reports	20%
Weekly Progress Reports	40%

#### Course Outcomes and Learning Objectives:

# Course Outcome 1.

Create a Project Requirements Specification

# Learning Objectives 1.

Create Service Request

Prepared: Mark Allemang Approved: Corey Meunier

> Develop the problem statement Establish priorities Establish a method to study the present system Organize the products of the study Review existing procedures Observing current operations

#### Course Outcome 2.

Create a Functional Specification

# Learning Objectives 2.

Define WHAT the system will do as follows: Perform interviews and walkthroughs Define the Scope of the system. Define the prototype consisting of a description of the functions as well as examples screens/panels

### Course Outcome 3.

Create a System Design Specification

# Learning Objectives 3.

Define HOW the system will be built as follows:

Build prototype: may contain: reports, screens, functions, controls and any interfaces/interface devices.

Define the database structure and contents, from table definitions and keys identified, to attributes.

Ensure data normalization

Describe types of data validation and verification techniques

Identify different reporting types

Identify output formats

Create the required windows interfaces.

Design any required coding techniques, code each object and any functions and modules.

Develop and enter test data

Prepared: Mark Allemang Approved: Corey Meunier

Establish version controls

#### Course Outcome 4.

Perform project management and provide any ancillary materials

# Learning Objectives 4.

Establish documentation procedures, and creation of user guide Identify the hardware the system will eventually reside on.

Monitor team member progress.

Establish milestones and monitor progress.

Train end users

Ensure operating acceptance

Establish responsibilities for making revisions.

Establish backup procedures.

Date:

Friday, September 1, 2017

Please refer to the course outline addendum on the Learning Management System for further

information.
