SAULT COLLEGE OF APPLIED ARTS AND TECHNOLOGY SAULT STE. MARIE, ONTARIO

COURSE OUTLINE

COURSE TITLE: <u>INTRODUCTION TO PROGRAMMING</u>

CODE NO.: CSD102 SEMESTER: 2

PROGRAM: <u>ALL INFORMATION TECHNOLOGY PROGRAMS</u>

AUTHOR: <u>Dennis Ochoski</u>

DATE: Jan. 2012 PREVIOUS OUTLINE DATED: Jan. 2011

APPROVED: "Brian Punch" Jan/12

CHAIR DATE

TOTAL CREDITS: 5

PREREQUISITE(S): None

HOURS/WEEK: 5

CSD102 COURSE CODE

I. COURSE DESCRIPTION:

This course is intended to provide a firm foundation of computer programming skills needed in the information technology area. The C/C++ programming language is used to develop the student's skills in problem solving, computer programming, and software utilization.

II. TOPICS TO BE COVERED:

- 1. Introduction to logic and computer programming concepts.
- 2. C/C++ program structures and format.
- 3. Decisions/Conditions in C/C++.
- 4. Repetition/Looping in C/C++.
- 5. Modularization using User-Defined Functions.
- 6. Advanced Concepts with User-Defined Functions.
- 7. The Debugger.
- 8. Arrays/Tables.
- 9. Pointers.
- 10. Advanced Concepts with Characters and Strings.
- 11. Data Structures.
- 12. Files (if time permits).

CSD102 COURSE CODE

III. LEARNING OUTCOMES AND ELEMENTS OF THE PERFORMANCE:

Upon successful completion of this course the student will demonstrate the ability to:

1. Discuss and apply the concepts involved in the development of a program to solve problems using the computer and write simple C/C++ programs applying the concepts of input/output, arithmetic, and assignment.

References at cplusplus.com:

Basics of C++: Structure of a program

Variables. Data Types.

Constants

Operators

Basic Input/Output

This learning outcome will comprise 15% of the course.

Elements of the performance:

- understand the importance of logic in developing a solution to a problem
- define the concept of a "computer program/software"
- · differentiate between a high level language, compiler and machine language
- describe the top-down process of developing a logical solution to a problem and use pseudocode to plan a series of detailed steps leading to a solution
- understand the "golden rule" for writing computer programs
- demonstrate an understanding of the Microsoft Visual C++ environment
- explain the main components of a C/C++ program
- name and distinguish C/C++ basic data types
- explain and properly use the naming conventions for C/C++ identifiers
- differentiate between character, string, and numeric constants
- differentiate between character and numeric variables
- · declare and initialize variables correctly
- · explain computer memory concepts and how they relate to processing data
- use assignment operators (=, +=, -=, *=, /=) for assigning values/expression results to variables
- use increment/decrement operators (++, --) to increase/decrease values by 1
- use arithmetic operators and apply their precedence (+, -, *, /, %)
- evaluate integer and mixed-mode arithmetic correctly
- use various C++ math library functions to perform arithmetic calculations
- explain automatic promotion and apply typecasting to define data types
- describe the purpose of a compiler/interpreter
- describe the process of transforming a source program to an executable module

CSD102 COURSE CODE

Elements of the performance(cont'd):

- · differentiate between syntax and logic errors
- apply the cin object to perform input of data
- apply the cout object to perform output of data
- apply the *getline()* function to accept string values that include a space(s)
- apply the setw(), setprecision(), and setf() manipulators to format output on the screen
- explain and apply the #include directive
- explain the purpose of "include" files for the cin and cout objects
- write algorithms to solve problems using pseudocode
- · write, test, and debug programs using the concepts above
- 2. Develop algorithms and write C/C++ programs to solve problems involving the standard computer operations of decisions/conditions and selection.

References at cplusplus.com:

Control Structures: Control Structures (conditions)

This learning outcome will comprise **15%** of the course.

Elements of the performance:

- describe and use the relational operators (==, !=, <, <=, >, >=)
- describe the use of the logical operators (&&, ||) and use them to write both simple and complex expressions
- describe the operation of the following C/C++ decision-making structures and use them in C/C++ programs:
 - i. if...else
 - ii. nested ifs
 - iii. if...else if...else
 - iv. the switch statement
- write algorithms to solve problems containing decision-making structures, and describe them using pseudocode
- write, test, and debug programs containing decision structures

CSD102 COURSE CODE

3. Develop algorithms and write C/C++ programs to solve problems involving the standard computer operations of looping and repetition, and, debug program logic errors using the C++ Debugger.

References at cplusplus.com:

Control Structures: Control Structures (loops)

This learning outcome will comprise 15% of the course.

Elements of the performance:

- discuss the concept of repetition/looping in computer programs
- describe the operation of the following C/C++ repetition structures and use them in C/C++ programs:

i. while

ii. do...while

iii. for

iv. nested loops

- use break, continue, and exit to terminate the iteration of a loop
- write algorithms to solve problems containing repetition structures, and describe them using pseudocode
- describe and correct an "infinite loop" problem
- · execute code one line at a time using the Step Debugger
- use the following stepping options: Go, Step Into, Step Over, Step Out, Watch, and Run to Cursor
- define, as well as, insert and remove break
- write, test, and debug programs containing repetition structures

CSD102 COURSE CODE

4. Discuss and create user-written, independently-compiled functions.

References at cplusplus.com:

Control Structures: Functions (I)

Functions (II)

This learning outcome will comprise 15% of the course.

Elements of the performance:

- understand the role and operation of functions in C/C++ and other languages
- distinguish between the calling and the called functions
- understand the concept of scope
- distinguish between *local* and *global* variables
- discuss and apply the concepts of 'passing' arguments to called functions by value
- discuss and apply the concept of 'returning' values to calling functions
- write, test, and debug programs containing functions
- discuss and apply the concept of pointers and pointer arithmetic
- discuss and apply the concept of pointers in C/C++
- define and apply the concepts of the following terms:

scope calling vs called functions function prototypes local vs global variables pass by value return statement overloaded functions auto vs static variables arguments/parameters

- develop modularized, structured programs by creating user-written functions
- · discuss and apply the concepts of 'passing' arguments to called functions by value
- discuss and apply the concept of 'returning' values to calling functions
- discuss and apply the concepts of 'passing' arguments to called functions by reference
- develop modularized, structured programs by creating user-written functions

CSD102 COURSE CODE

Develop algorithms and write C++ programs to solve problems involving tables/arrays.

References at cplusplus.com: Compound Data Types: Arrays

This learning outcome will comprise approximately **15%** of the course.

Elements of the performance:

define and apply the concepts of the following terms:

one-dimensional array index value subscript two-dimensional array null character

- discuss the purpose and concepts relating to one- and two-dimensional arrays
- · declare and initialize both numeric and character arrays
- apply the concept of pointers to arrays
- · access and process array elements
- · pass arrays between functions
- write, test, and debug programs containing arrays
- 6. Discuss and apply the concepts of character sequences/arrays and string manipulation with reference to C/C++ library functions.

References at cplusplus.com:

Compound Data Types: Character Sequences

This learning outcome will comprise approximately 5% of the course.

Elements of the performance:

- understand and utilize the C++ string class and its associated functions to declare string variables and manipulate string values
- discuss and apply character-based functions such as:

cin.get()	tolower()	toupper()	isalpha()
isdigit()	isalnum()	islower()	isupper()

CSD102 COURSE CODE

Elements of the performance(cont'd):

• discuss and apply string functions such as:

str.append() str.compare() str.length() str.copy()

- write, test, and debug programs containing character and string functions
- 7. Develop algorithms to solve problems involving the use of data structures.

References at cplusplus.com:

Compound Data Types: <u>Data Structures</u>

This learning outcome will comprise approximately **10%** of the course.

Elements of the performance:

define and apply the concepts of the following terms:

structure member record internal pointer

- discuss the concept of structures in C/C++
- · declare and initialise a structure
- access and process structure members
- apply the use of arrays of structures
- apply methods of passing and returning structures to and from functions
- · write, test, and debug programs containing structures

CSD102 COURSE CODE

8. Develop algorithms to solve problems involving the use of file manipulation. (if time permits)

References at cplusplus.com:

C++ Standard Library: Input/Output with fi...

This learning outcome will comprise approximately 5% of the course.

Elements of the performance:

define and apply the concepts of the following terms:

file open read close write append

- · create a disk file
- · write data to, and, read data from a disk file
- perform disk I/O with records
- · create, and manipulate sequential and random access files
- · write, test, and debug programs containing files

CSD102 COURSE CODE

Grade Point

V. EVALUATION PROCESS/GRADING SYSTEM:

Evaluation Methods	Weight
Quizzes	10%
Tests	60%
Assignments	<u>30%</u>
-	100%

The following semester grades will be assigned to students in postsecondary courses:

		Oraao i Oiiit
<u>Grade</u>	<u>Definition</u>	Equivalent
A+	90 – 100%	4.00
Α	80 - 89%	4.00
В	70 - 79%	3.00
С	60 - 69%	2.00
D	50 – 59%	1.00
F(Fail)	below 50%	0.00
CR (Credit)	Credit for diploma requirements has been awarded.	
S	Satisfactory achievement in field/clinical	
J	placement or non-graded subject area.	
U	Unsatisfactory achievement in	
•	field/clinical placement or non-graded	
	subject area.	
Χ	A temporary grade limited to situations	
	with extenuating circumstances giving a	
	student additional time to complete the	
	requirements for a course.	
NR	Grade not reported to Registrar's office.	
W	Student has withdrawn from the course	
	without academic penalty.	

CSD102 COURSE CODE

VI. OTHER EVALUATION CONSIDERATIONS

- 1. In order to pass this course the student must obtain an overall test/quiz average of **50%** or better, as well as, an overall assignment average of **50%** or better. A student who is not present to write a particular test/quiz, and does not notify the professor beforehand of their intended absence, may be subject to a zero grade on that test/quiz.
- 2. There will be **no** supplemental or make-up quizzes/tests in this course unless there are extenuating circumstances.
- Assignments must be submitted by the due date according to the specifications of the professor. Late assignments will normally be given a mark of zero. Late assignments will only be marked at the discretion of the professor in cases where there were extenuating circumstances.
- Any assignment/projects submissions, deemed to be copied, will result in a zero grade being assigned to all students involved in that particular incident.
- 5. It is the responsibility of the student to ask the professor to clarify any assignment requirements.
- 6. The professor reserves the right to modify the assessment process to meet any changing needs of the class.

VII. SPECIAL NOTES:

Communication:

The professor reserves the right to use tools other than **WebCT/LMS**, such as Microsoft Outlook, for the primary channel of communication.

CSD102 COURSE CODE

Attendance:

Sault College is committed to student success. There is a direct correlation between academic performance and class attendance; therefore, for the benefit of all its constituents, all students are encouraged to attend all of their scheduled learning and evaluation sessions. This implies arriving on time and remaining for the duration of the scheduled session. It is the departmental policy that once the classroom door has been closed, the learning process has begun. Late arrivers may not be granted admission to the room.

Absences due to medical or other unavoidable circumstances should be discussed with the professor, otherwise a penalty may be assessed. The penalty depends on course hours and will be applied as follows:

Course Hours	Deduction
5 hrs/week (75 hrs)	1.0% /hr
4 hrs/week (60 hrs)	1.5% /hr
3 hrs/week (45 hrs)	2.0% /hr
2 hrs/week (30 hrs)	3.0% /hr

Absentee reports will be discussed with each student. Final penalties will be reviewed and assessed at the discretion of the professor.

VIII. COURSE OUTLINE ADDENDUM:

The provisions contained in the addendum located on the portal form part of this course outline.
