

I. COURSE DESCRIPTION:

This course deals with stress analysis, anti-friction bearings, lubrication and journal bearings, gearing, stress concentrations, theories of failure, fatigue and endurance limits, selection of materials and consideration in production methods

II. LEARNING OUTCOMES AND ELEMENTS OF THE PERFORMANCE:

Upon successful completion of this course, the student will demonstrate the ability to:

1. *Nature and Composition of Machines and Aspects of Machines*Potential Elements of the Performance:

- Explain the concept of machines and their purpose
- Identify classifications and characteristics of machines
- Identify and understand the concept of simple machines and how they make up complex machines
- Explain machine elements
- Understand the correlation of work, energy and efficiency in regards to machines
- Define Mechanical efficiency
- Define Power and understand the basic power equation
- Identify and explain power for driven machines such as electric motors, internal combustion engines, air and hydraulic motors.
- Explain the effects of vibration in machine design
- Understand torque characteristics and curves
- Understand and explain service factor and design power
- Explain the basic aspects of design
- Understand the human factors engineering and why it is important in regards to machine design
- Discuss the design process
- Identify and explain various modes of failure
- Explain the design criteria
- Understand the importance of computations, errors that can occur during computations and how to effectively revise computations

2. ***Design for Strength, Rigidity, Stability and Resistance to Wear***

Potential Elements of the Performance:

- Understand Nomenclature surrounding permanent fasteners
- Identify and analyze various loading types
- Understand mechanical properties of engineering material and how materials are selected
- Perform and explain basic analysis of material strength and define and explain Hooke's law, stress-strain parameters, the stress-strain curve and shear modulus
- Explain working stresses while defining de-rating factors, factors of safety and cyclic loading
- Understand and apply the method of dimensioning based on strength
- Interpret stress-cycle diagrams and determine solutions to problems using these diagrams
- Identify and explain common fatigue factors
- Calculate and understand fatigue stress approximations
- Identify and define numerous types of fatigue strength de-rating factors
- Define and apply equations to determine stress concentrations
- Explain surface treatment and corrosion
- Understand and apply knowledge of fatigue stresses
- Explain the concept of designing for rigidity
- Understand the importance and be able to analyze stability of machine columns
- Explain cylindrical piston rod
- Identify friction and wear considerations in machine design

3. ***Rigid and Elastic Connections***

Potential Elements of the Performance:

- Understand the advantages and disadvantages of the various types of permanent fastenings
- Identify and define types of welding and list the field of application, advantages and classification of welds
- Understand the design of weldments and the precautions that should be observed
- Identify and describe characteristics of Primary Welds and Secondary Welds: butt welds, fillet welds, plug welds
- Analyze fatigue strength of weldments
- Understand soldering, brazing and riveting
- Identify and explain various types of fits: interference fits, driving fits, forced fits, shrinkage fits, expansion fits

- Describe and explain the function of detachable fasteners as well as identifying various types of these fasteners
- Analyze screw thread systems and materials used for threaded fasteners
- Identify common types of threaded fasteners and understand the uses for bolts, screws, nuts and locking devices, locknuts
- Explain the importance of washers and lock washers
- Understand and define thread inserts
- Define preload, fatigue and resiliency
- Explain stress considerations for threaded fasteners
- Understand and analyze the torque-tension relationship
- Explain other load conditions of detachable fasteners;
- Explain function, design principles and classification of springs
- Identify types of springs and understand the materials used for springs
- Analyze the load-deflection relationship
- Explain the concepts of energy storage and energy dissipation
- Understand the allowable stress present in spring design
- Analyze helical compression springs, including appropriate equations and computations
- Analyze the spring design chart
- Identify and discuss good design practices
- Analyze extension coil springs, including appropriate equations
- Analyze torsion coil springs, including appropriate equations
- Analyze leaf springs, including appropriate equations
- Analyze Belleville coil springs, including appropriate equations
- Understand coupling of springs

4. *Machine Elements for Torque-Speed Change and Rotary Power Transmission*

Potential Elements of the Performance:

- Explain the significance of power transmission and control
- Define the principles of power transmission
- Understand power transmission including mechanical power transmission, friction drives and hydraulic power transmission
- Explain and analyze screws for power transmission
- Understand the effects of centrifugal and inertial force
- Define the concept of optimum power
- Identify and describe mechanical adjustable speed drives
- Analyze the transverse force due to torque
- Understand the function and design of flexible couplings

- Identify the classification and standardization of flexible couplings
- Explain the conditions of misalignment and axial displacement
- Analyze flexible couplings design in detail
- Identify and explain overload-release couplings, fluid couplings, magnetic couplings and the universal couplings
- Understand the specification of couplings
- Explain the function and design concept for Spur and Helical Gears
- Understand the involute gear principles and overall concept of involute gears
- Identify and be able to explain gear terminology
- Explain standard spur gears including pitches and modules related
- Define the standard tooth proportions of spur gears
- Identify and explain limitations of spur gears
- Analyze modifications of spur gears and force and stress analysis
- Understand the design for surface durability
- Analyze gear manufacture and material
- Identify modifications for strength and noise abatement
- Describe internal gears and when they are used
- Understand the function and design for helical gears for parallel shafts
- Analysis of helical gears
- Interpret gear drawings
- Identify and describe gear trains for power transmission
- Identify and understand gears for non-parallel shafts: Bevel gears, Hypoid gears, helical gears, worm gearing,
- Analyze terminology, kinematics, efficiency and thermal ratings

5. *Machine Elements for Carrying and Transmitting Rotary Power*

Potential Elements of the Performance:

- Identify types of axles and shafts
- Explain designing for rigidity and strength for axles and shafts
- Describe the effects of fillets, keyseats and grooves
- Analyze materials for axles and shafts and how they affect rigidity, strength, wear resistance, corrosion resistance, weight and machinability
- Analyze various loading on shaft and axles including simple loading, steady bending loads and combined loading

- Understand the impact of hollow shafts
- Understand design concepts for strength, rigidity and torsional stiffness
- Explain bending of non-uniform shafts and axles
- Explain the function of bearings
- Understand the factors involved in choosing a bearing type
- Analyze the loads on bearings
- Identify types of lubricants utilized for bearings and explain lubricating regimes
- Explain selecting a bearing for light service and how the PV factor is interpreted
- Understand lubrication of journal bearings for severe service
- Apply journal bearing design charts
- Explain lubricant flow, temperature rise and heat balance for pressure fed journal bearings
- Identify and explain practical choices for design factors
- Understand design and characteristics of rolling-element bearings
- Define terminology and understand classification/standardization of rolling element bearings
- Identify and explain various types of rolling-element bearings: ball bearings, roller bearings, needles bearings
- Analyze bearing capacities
- Apply bearing characteristics to determine bearings life
- Understand additional factors affecting bearing life

III. TOPICS:

1. Nature and Composition of Machines and Aspects of Machine Design
2. Design for Strength, Rigidity, Stability and Resistance to Wear
3. Rigid and Elastic Connections; Permanent connections, Flexible connections and Springs
4. Machine Elements for Torque-Speed Change and Rotary Power Transmission
5. Machine Elements for Carrying and Transmitting Rotary Power

IV. REQUIRED RESOURCES/TEXTS/MATERIALS:

Hindhede, Uffe, Machine Design Fundamentals – A Practical Approach, Prentice Hall, ISBN 0-13-054176-3 025

V. EVALUATION PROCESS/GRADING SYSTEM:

Type of Grading	Duration	Mark Breakdown
Term Test 1	2.0 hours	33%
Term Test 2	2.0 hours	33%
Term Test 3	2.0 hours	33%

The following semester grades will be assigned to students:

Grade	Definition	<i>Grade Point Equivalent</i>
A+	90 – 100%	4.00
A	80 – 89%	
B	70 - 79%	3.00
C	60 - 69%	2.00
D	50 – 59%	1.00
F (Fail)	49% and below	0.00
CR (Credit)	Credit for diploma requirements has been awarded.	
S	Satisfactory achievement in field /clinical placement or non-graded subject area.	
U	Unsatisfactory achievement in field/clinical placement or non-graded subject area.	
X	A temporary grade limited to situations with extenuating circumstances giving a student additional time to complete the requirements for a course.	
NR	Grade not reported to Registrar's office.	
W	Student has withdrawn from the course without academic penalty.	

VI. SPECIAL NOTES:Attendance:

Sault College is committed to student success. There is a direct correlation between academic performance and class attendance; therefore, for the benefit of all its constituents, all students are encouraged to attend all of their scheduled learning and evaluation sessions. This implies arriving on time and remaining for the duration of the scheduled session.

Re-Writes:

Re-Writes for tests will not be granted in this course.

VII. COURSE OUTLINE ADDENDUM:

The provisions contained in the addendum located on the portal form part of this course outline.
