SAULT COLLEGE OF APPLIED ARTS AND TECHNOLOGY

SAULT STE. MARIE, ONTARIO

COURSE OUTLINE

COURSE TITLE: HEAVY EQUIPMENT III - THEORY

CODE NO.: HED200 SEMESTER: 3

PROGRAM: Truck and Coach / Heavy Duty Equipment Technician

AUTHOR: George Parsons

DATE: June **PREVIOUS OUTLINE DATED:** May

2008 2007

APPROVED:

"Corey Meunier" Jul 18 08

CHAIR DATE

TOTAL CREDITS: 13

PREREQUISITE(S): HED111

HOURS/WEEK: 8 hrs.for 15 wks.

I. COURSE DESCRIPTION:

This course will present hydraulic circuitry, basic electrical principles, battery, charging and cranking circuits, diesel fuel supply systems and injection basics for pressure/ time, in-line and rotary pumps as well as hydraulic injectors. Safety elements of the repair industry will be stressed. Demonstrated skills learned in this semester will enable students to support the trucking, agricultural, construction, material handling, mining, forestry, railway and equipment rental industries.

II. LEARNING OUTCOMES AND ELEMENTS OF THE PERFORMANCE:

Upon successful completion of this course, the student will demonstrate the ability to:

- 1. Recognize hydraulic components and their proper function in mobile equipment and schematic circuits, and determine the correct diagnostic flow-meter and pressure tests as well as cycle time, temperature, and sound troubleshooting techniques.

 Potential Elements of the Performance:
 - Recognize hydraulic operating principles, force and torque multiplication.
 - Identify reservoir, filter, pump and actuator components, their purpose and function within a hydraulic circuit.
 - Identify directional control valves, their classification and operating characteristics.
 - Distinguish between pressure relief, reducing, and sequence valves, and their function and effect in hydraulic circuits.
 - Recognize holding valves, their safety responsibility and working characteristics.
 - Recognize axial and radial piston pumps, their operating principles, intended safeguards and maintenance checks
 - Recommend the correct troubleshooting techniques to determine component faults for both pressure and flow related problems.
- 2. Competently interpret electrical circuit schematics, identify components, their operating principles and maintenance required, recommend the proper troubleshooting techniques with multi-meter and testing equipment for electrical circuit maintenance and repair. Potential Elements of the Performance:
 - Identify electrical energy, its sources, terminology for measurement of flow and pressure and power ratings.
 - Calculate circuit resistance, amperage and voltage drops.
 - Identify analog and digital multimeter characteristics, their proper and practical uses.

- Identify lead acid battery construction, operating principles, safety considerations, maintenance and testing procedures.
- Recognize magnetic and electro-magnetic sources and components, force fields, polarities and amp/turn field relationships.
- Recognize electronic, semiconductive devices, their construction, operating principles and use in charging alternators and voltage regulators and micro processing controls.
- Identify electrical charging components, construction, operating principles, maintenance and testing.
- Identify engine cranking systems including air and hydraulic starters.
- Identify electrical cranking motor operation, construction, maintenance and testing procedures.
- Recommend the proper troubleshooting technique, instrument and correct installation for isolating electrical circuit faults.
- Recognize and recommend the proper service and maintenance of diesel fuel supply systems encountered in the mobile equipment industries.

Potential Elements of the Performance:

- Identify diesel fuel oil and its characteristics and safety considerations.
- Identify fuel tank, water traps, primary filters, charge pump and regulator valves, priming devices, secondary filters, bleeding devices and charge pressure check points.
- Identify combustion requirements for diesel compression ignition.
- Identify the requirements of all fuel injection systems as to timing, rate, distribution, atomization, duration and metered amount of fuel.
- Recognize pressure time fuel injection systems., their individual components, operation principles, adjustment and maintenance.
- Recognize and identify multiplunger in line injection pump components including governors, air/fuel ratio devices, and their operating principles.
- Distinguish hydraulic injectors from mechanical, unit, and electronically controlled unit injectors, determine their operating principles and testing criteria and adjusting procedure.
- Identify mechanically actuated, unitized injectors, operation and maintenance procedures.
- Identify Stanadyne rotary distributor fuel injection pumps,

operation, timing and maintenance.

• Identify sleeve metering rotary distributor injection pumps, operation, timing and maintenance.

III. TOPICS:

- Hydraulics Hydraulic basics, reservoirs, pumps, filters, relief valves, directional and pressure control valves, cylinders, holding valves, hydraulic motors, and various troubleshooting techniques.
- 2. Electrical Basics, meters, circuits and calculations, batteries, cranking and charging systems, electric troubleshooting
- 3. Fuel supply systems Charge pumps, primary and secondary filters, water separators, fuel heaters
- 4. Fuel Injection systems Pressure / time, in-line multiplunger, hydraulic injectors, unit injection, rotary distributor pumps (i) Stanadyne (ii) VE Bosch

IV. REQUIRED RESOURCES/TEXTS/MATERIALS:

Heavy Duty Truck Systems 4th Edition (Thomson Delmar)
Diesel Technology (Nelson Thompson)
Diesel Technology Workbook
Vickers Mobile Hydraulics Manual
Power Trains (John Deere)
Pens, pencils, coloured pencils, calculator, and 3-ring binder

V. EVALUATION PROCESS/GRADING SYSTEM:

The Heavy Equipment Program considers both HED200-13 Theory and HED201-9 Shop to be <u>co-requisites</u>. Students must successfully complete both courses in the same semester.

Theory letter grades are based on;

- 70% of semester theory examination average
- 20% of semester theory assignment average
- 10% of assessed employability skills (attendance, punctuality, work ethics, and general attitude)

The following semester grades will be assigned to students:

Grade	<u>Definition</u>	Grade Point Equivalent
A+ A	90 – 100% 80 – 89%	4.00
В	70 - 79%	3.00
С	60 - 69%	2.00
D	50 – 59%	1.00
F (Fail)	49% and below	0.00
CR (Credit)	Credit for diploma requirements has been awarded.	
S	Satisfactory achievement in field /clinical	
U	placement or non-graded subject area. Unsatisfactory achievement in field/clinical placement or non-graded	
X	subject area. A temporary grade limited to situations with extenuating circumstances giving a student additional time to complete the	
NR W	requirements for a course. Grade not reported to Registrar's office. Student has withdrawn from the course without academic penalty.	

VI. SPECIAL NOTES:

Special Needs:

If you are a student with special needs (e.g. physical limitations, visual impairments, hearing impairments, or learning disabilities), you are encouraged to discuss required accommodations with your professor and/or the Special Needs office. Visit Room E1101 or call Extension 2703 so that support services can be arranged for you.

Retention of Course Outlines:

It is the responsibility of the student to retain all course outlines for possible future use in acquiring advanced standing at other postsecondary institutions.

Communication:

The College considers **WebCT/LMS** as the primary channel of communication for each course. Regularly checking this software platform is critical as it will keep you directly connected with faculty and current course information. Success in this course may be directly related to your willingness to take advantage of the **Learning Management System** communication tool.

Plagiarism:

Students should refer to the definition of "academic dishonesty" in *Student Code of Conduct*. Students who engage in academic dishonesty will receive an automatic failure for that submission and/or such other penalty, up to and including expulsion from the course/program, as may be decided by the professor/dean. In order to protect students from inadvertent plagiarism, to protect the copyright of the material referenced, and to credit the author of the material, it is the policy of the department to employ a documentation format for referencing source material.

Course Outline Amendments:

The professor reserves the right to change the information contained in this course outline depending on the needs of the learner and the availability of resources.

Substitute course information is available in the Registrar's office.

VII. PRIOR LEARNING ASSESSMENT:

Credit for prior learning will be given upon successful completion of a challenge exam or portfolio.

VIII. ADVANCE CREDIT TRANSFER:

Students who wish to apply for advance credit transfer (advanced standing) should obtain an Application for Advance Credit from the program coordinator (or the course coordinator regarding a general education transfer request) or academic assistant. Students will be required to provide an unofficial transcript and course outline related to the course in question.
