For additional information, please contact Kitty DeRosario, Dean, Technology, Engineering and Trades Programs, (705) 759-2554, Ext. 642. **COURSE DESCRIPTION:** This course helps the student to develop the necessary academic and theoretical basis to transfer practical shop experiences to various machining operations and situations. The theory in conjunction with the other courses of study in the program is designed around CAMC's (Canadian Aviation Maintenance Council) occupational analysis. This course will also allow the student the opportunity to leam, practice and demonstrate a number of the generic skill requirements as outlined in the provincial generic skill (earning outcomes documents.

LEARNING OUTCOMES AND ELEMENTS OF PERFORMANCE:

(Generic Skills elements of performance, teachings, experiences are so indicated G.S.#**)

A. Learning Outcomes:

1. Demonstrates sufficient knowledge to work safely in both hangar and shop operations.

2. Demonstrates the ability to use various shop formulas to determine sizes, speeds, feeds etc. accurately and efficiently to complete various machining functions using acceptable machining **sequencing**.

3. Utilizes various hand tools and layout tools safely and competently to manufacture machined components to generally recognized shop practices.

4. Utilizes various measuring tools competently to inspect and manufacture machined components to generally recognized shop practices.

5. Demonstrates knowledge of machining operations on lathes and lathe operations to manufacture machined components to generally recognized shop practices.

6. Demonstrates knowledge of machining operations on drills and drilling

operations to manufacture machined components to generally recognized shop practices.

7. Demonstrates knowledge of machining operations on mills and milling

machine operations to manufacture machined components to generally recognized shop practices.

8. Demonstrates knowledge of machining operations on grinders and grinding

operations to manufacture machined components to generally recognized shop practices.

B. Learning Outcomes and Elements of the Performance:

Upon successful completion of this course the student will demonstrate the ability to:

1. Demonstrates sufficient knowledge to work safely in both hangar and shop operations. *(Corresponds to CAMC Task 1)*

recognize and alleviate potential hazards

recognize and handle hazardous materials in conformance with WHMIS legislation comply with government safety standards and regulations recognize and utilize various types of personal protective safety equipment recognize and utilize operating procedures for emergency safety equipment (fire extinguishers and lockouts)

2. Demonstrates the ability to use various shop formulae to determine sizes, speeds, feeds etc. accurately and efficiently to complete various machining functions using acceptable machining sequencing.

- change to various units of measurement accurately
- determine the initial cutting speeds and feeds consistent with industry standards and accepted practice.
- determine machining sequences
- determine volume, weights and time estimates for manufacturing

3. Utilizes various hand tools and layout tools safely and competently to manufacture machined components to generally recognized shop practices. (Corresponds to CAMC Task 5)

• identify handtools and their pans

- demonstrate knowledge of handtool capability application and durability
- demonstrate knowledge of tool geometry and shapes dependent on operation

- demonstrate knowledge of handheld electric and pneumatic handheld tools
- demonstrate knowledge of handheld power tools function and accessories
- demonstrate knowledge of various layout tools and procedures to accurately and competently utilize them in generally accepted shop practice

4. Utilizes various measuring tools competently to inspect and manufacture machined components to generally recognized shop practices.

- demonstrate knowledge of measuring tool limits, accuracy and application
- demonstrate techniques for measuring lengths, angles, diameters, depths and surface quality
- demonstrates knowledge of vernier calipers, micrometers, bevel protractors, dial indicators, sine bars, gauge blocks and specialized measuring tools and instruments

5. Demonstrates knowledge of machining operations on lathes and lathe operations to manufacture machined components to generally recognized shop practices. *(Corresponds to CAMC Task 15)*

•demonstrates knowledge of various lathes, their parts and function of the parts

- demonstrates the ability to identify the various types of lathe operations and sequencing to safely and accurately manufacture components in a variety of settings
- demonstrates knowledge of various workholding devices and lathe accessories and their utilization to manufacture components.
- demonstrates knowledge of preventative maintenance of the machine tool and adjustments to accurately and safely manufacture components

6. Demonstrates knowledge of machining operations on drills and drilling operations to manufacture machined components to generally recognized shop practices. (*Corresponds to CAMC Task 14*)

• demonstrates knowledge of various drilling machines, their parts and function of the parts

- demonstrates the ability to identify the various types of drilling operations and sequencing to safely and accurately manufacture components in a variety of settings
- demonstrates knowledge of various workholding devices and drilling accessories and their utilization to manufacture components.
- demonstrates knowledge of preventative maintenance of the machine tool and adjustments to accurately and safely manufacture components

7. Demonstrates knowledge of machining operations on mills and milling machine operations to manufacture machined components to generally recognized shop practices. (*Corresponds to CAMC Task 16, 17 & 18*)

• demonstrates knowledge of various milling machine, their parts and function of the parts

- demonstrates the ability to identify the various types of mill operations and sequencing to safely and accurately manufacture components in a variety of settings
- demonstrates knowledge of various workholding devices and mill accessories and their utilization to manufacture components.
- demonstrates knowledge of preventative maintenance of the machine tool and adjustments to accurately and safely manufacture components

Demonstrates knowledge of machining operations on grinders and grinding operations to manufacture machined components to generally recognized shop practices. (*Corresponds to CAMC Task 19*)

- · demonstrates knowledge of various grinders, their parts and function of the parts
- demonstrates the ability to identify the various types of grinding operations and sequencing to safely and accurately manufacture components in a variety of settings
- demonstrates knowledge of various workholding devices and grinding accessories and their utilization to manufacture components.
- demonstrates knowledge of preventative maintenance of the machine tool and adjustments to accurately and safely manufacture components

III. TOPICS:

The topics and topic areas will vary depending on the needs of the student and the work that is being done in the shop. The topics listed above sometimes overlap several areas of skill development and are not necessarily intended to be explored in isolated units or in a particular area.

IV. REQUIRED STUDENT RESOURCES:

Text: Machine Tool Practice, 5th Edition, <u>Kibbe, Neelv.</u> pub. Prentice Hall Students are expected to attend class with notebooks, text and a calculator

V. GRADING:

A final grade will be given as a letter in accordance with the following percentage equivalent:

A+	Consistently Outstanding	(90-100%)
A	Outstanding Achievement	(80-89 %)
В	Consistently above average achievement	(70-79 %)
С	Satisfactory or acceptable achievement in all	, , , , , , , , , , , , , , , , , , ,
	areas subject to assessment	(60-69 %)
R	Repeat : The student has not achieved the objectives of the course and the course	· · · · ·
	must be repeated.	(Less than 60 %)
CR	Credit exemption	· · · ·
Х	A temporary grade to carry over into next semester	given only
for ex	treme circumstances	

R = did not meet course requirements at this time

VI. EVALUATION METHODS: (INCLUDES ASSIGNMENTS, ATTENDANCE REQUIREMENTS, ETC.)

A final grade will be derived as follows:

WHIMIS and safety quiz	= 10%
Test 2 (mid term)	=15%
Test 3 (final)	=15%
5 mini-quizes random throughout semester	= 25%
Technical report and presentation	= 10%
Written Assignment (s)	• 10%
Attendance including homework **	= 15%

** Note : Attendance is not only a measure of physical presence at a certain hour but also the students cooperation and initiative. As attendance is expected the student will be will lose 1 % for every hour missed or late without a justified excuse

TIME FRAME:

Aviation Machine Shop theory MCH -117 involves 5 periods per week for the entire semester. Students are expected to attend class and participate in class activities.

VI. SPECIAL NOTES:

Special Needs

If you are a student with special needs (e.g., physical limitations, visual impairments, hearing impairments, learning disabilities), you are encouraged to discuss required accommodations with your instructor and/or councilor so that support services may be arranged.

Academic Dishonesty

Students should refer to the definition of "academic dishonesty" in the "Statement of

Student Rights and Responsibilities"

Stuaents who engage in "academic dishonesty" will receive an automatic failure for that submission and/or other such penalty, up to and the professor may decide including expulsion from the course as.

Advanced Standing

Students who have completed an equivalent post-secondary course should bring relevant documents to the coordinator, Machine Shop programs, School of Engineering

Retention of Course Outlines

It is the responsibility of the student to retain all course outlines for possible future use in gaining advanced standing at other post-secondary institutions

VII. PRIOR LEARNING ASSESSMENT:

Students who wish to apply for advanced credit in the course should consult the professor. Credit for prior learning will be given upon successful completion of the following:

1) Documentation that they have successfully completed another post secondary or equivalent course.

2) Successful completion of a challenge exam administered by the professor of the course.
