

## COURSE OUTLINE: CSD202 - SYST ANALYSIS DESIGN

Prepared: D. Kachur

Approved: Corey Meunier, Chair, Technology and Skilled Trades

Course Code: Title	CSD202: SYSTEMS ANALYSIS AND DESIGN			
Program Number: Name	2091: COMPUTER - PROG/ANAL 2095: COMPUTER PROGRAMMING			
Department:	COMPUTER STUDIES			
Semesters/Terms:	21F			
Course Description:	In this course we will follow a structured, methodical approach to systems analysis and design. The student will gain a thorough understanding of the System Development Life Cycle (SDLC) through the preparation of deliverables (documents, discussions, coding) at each stage. We will also compare and contrast some of the newer development methodologies such as the modified SDLC, Rapid Application Design (RAD), Object Oriented Analysis and Design (OOA&D), and others.			
	The most important component of system development will always be communication. Therefore, communication is the key to success in software development and thus oral, written and interpersonal communication skills will be the main focus of this course. Students will work individually, and within a team environment, to develop their analytic/system design skills and prepare a complete system proposal.			
Total Credits:	5			
Hours/Week:	3			
Total Hours:	45			
Prerequisites:	There are no pre-requisites for this course.			
Corequisites:	There are no co-requisites for this course.			
This course is a pre-requisite for:	CSD318			
Vocational Learning Outcomes (VLO's) addressed in this course:	2091 - COMPUTER - PROG/ANAL			
	VLO 2 Analyze and define the specifications of a system based on requirements.			
	VLO 3 Design, test, document, and deploy programs based on specifications.			
Please refer to program web page for a complete listing of program	VLO 6 Propose and justify the design and development of an integrated solution based on an analysis of the business environment.			
outcomes where applicable.	VLO 7 Use relevant methodologies, policies, and standards to develop integrated solutions.			
	VLO 8 Apply knowledge of security issues in the analysis, design, and implementation of integrated solutions.			
	VLO 11 Contribute to the successful completion of the project applying the project management principles in use.			
	2095 - COMPUTER PROGRAMMING			

In response to public health requirements pertaining to the COVID19 pandemic, course delivery and assessment traditionally delivered in-class, may occur remotely either in whole or in part in the 2021-2022 academic year.

SAULT COLLEGE | 443 NORTHERN AVENUE | SAULT STE. MARIE, ON P6B 4J3, CANADA | 705-759-2554

CSD202: SYSTEMS ANALYSIS AND DESIGN Page 1

	VLO 1	Identify, analyze, develop, implement, verify and document the requirements for a computing environment.
	VLO 7	Apply project management principles and tools when working on projects within a computing environment.
	VLO 8	Adhere to ethical, legal, and regulatory requirements and/or principles in the development and management of computing solutions and systems.
	VLO 9	Support the analysis and definition of software system specifications based on functional and non-functional requirements.
	VLO 11	Apply one or more programming paradigms such as, object-oriented, structured or functional programming, and design principles, as well as documented requirements, to the software development process.
Essential Employability Skills (EES) addressed in	EES 1	Communicate clearly, concisely and correctly in the written, spoken, and visual form that fulfills the purpose and meets the needs of the audience.
this course:	EES 2	Respond to written, spoken, or visual messages in a manner that ensures effective communication.
	EES 4	Apply a systematic approach to solve problems.
	EES 5	Use a variety of thinking skills to anticipate and solve problems.
	EES 6	Locate, select, organize, and document information using appropriate technology and information systems.
	EES 7	Analyze, evaluate, and apply relevant information from a variety of sources.
Course Evaluation:	Passing	Grade: 50%, D
	A minimu for gradu	um program GPA of 2.0 or higher where program specific standards exist is required lation.
Other Course Evaluation & Assessment Requirements:	A+ 90 - 1 A 80 - 89 B 70 - 79 C 60 - 69 D 50 59%	9% 3.00 9% 2.00

	to illness provide r	are expected to be present to write all tests. If a student is unable to write a test due or a legitimate emergency, that student must contact the professor prior to class and easoning, which is acceptable to the professor. Should the student fail to contact the r, the student shall receive a grade of zero on the test.
	Once the	test has commenced, the student is considered absent and will not be given the

SAULT COLLEGE | 443 NORTHERN AVENUE | SAULT STE. MARIE, ON P6B 4J3, CANADA | 705-759-2554

privilege of writing the test.

Students involved with academic dishonesty during a test will receive an automatic zero. Please refer to the College Academic Dishonesty Policy for further information.

In order to qualify to write a missed test, the student shall have:

- a) attended at least 80% of the classes.
- b) provided the professor an acceptable explanation for his/her absence.
- c) been granted permission by the professor.

NOTE: The missed test that has met the criteria above will be an end-of-semester test.

Academic success is directly linked to attendance. Missing more than 1/3 of the course hours in a semester may result in an `F` grade for the course.

Labs and Assignments are due on the due-date indicated by the Professor. Notice by the professor will be written on the lab or verbally announced in the class and / or both. No late labs will be accepted beyond the due date. Once labs / assignments have been marked by the professor and returned to the student, no new labs / assignments will be accepted. It is the responsibility of the student who has missed a class to contact the professor immediately to obtain the lab / assignment that is due at a future date. Students are responsible for doing their own work. Labs / assignments that are handed in and are deemed identical in content and personal wording to others may constitute academic dishonesty and result in a zero grade.

The total overall average of test scores combined must be 50% or higher in order to qualify to pass this course. In addition, combined tests, Labs / Assignments total grade must be 50% or higher.

## Course Outcomes and **Learning Objectives:**

Course Outcome 1	Learning Objectives for Course Outcome 1
Discuss the elements of Systems Analysis and Design	1.1 Describe the impact of information technology 1.2 Define systems analysis and design and the role of a systems analyst 1.3 Define an information system and describe its components 1.4 Explain how to use business profiles and models 1.5 Explain Internet business strategies and relationships, including B2C and B2B 1.6 Identify various types of information systems and explain who uses them 1.7 Distinguish among structured analysis, object-oriented analysis, and agile methods 1.8 Explain the waterfall model, and how it has evolved 1.9 Discuss the role of the information technology department and the systems analysts who work there
Course Outcome 2	Learning Objectives for Course Outcome 2
2. Analyze a basic business case	2.1 Explain the concept of a business case and how a business case affects an IT project 2.2 Describe the strategic planning process and why it is important to the IT team 2.3 Explain the purpose of a mission statement 2.4 Conduct a SWOT analysis and describe the four factors

In response to public health requirements pertaining to the COVID19 pandemic, course delivery and assessment traditionally delivered in-class, may occur remotely either in whole or in part in the 2021-2022 academic year.

SAULT COLLEGE | 443 NORTHERN AVENUE | SAULT STE. MARIE, ON P6B 4J3, CANADA | 705-759-2554

CSD202: SYSTEMS ANALYSIS AND DESIGN

	involved 2.5 Explain how the SDLC serves as a framework for systems development 2.6 List reasons for systems projects and factors that affect such projects 2.7 Describe systems requests and the role of the systems review committee 2.8 Define operational, technical, economic, and schedule feasibility 2.9 Describe the steps and the end product of a preliminary investigation
Course Outcome 3	Learning Objectives for Course Outcome 3
Describe the various tools and techniques that relate to Managing the Systems Project	3.1 Explain project planning, scheduling, monitoring, and reporting 3.2 Draw a project triangle that shows the relationship among project cost, scope, and time 3.3 Describe work breakdown structures, task patterns, and critical path analysis 3.4 Explain techniques for estimating task completion times and costs 3.5 Describe various scheduling tools, including Gantt charts and PERT/CPM charts 3.6 Analyze task dependencies, durations, start dates, and end dates 3.7 Describe project management software and how it can assist you 3.8 Discuss the importance of managing project risks 3.9 Describe why projects sometimes fail
Course Outcome 4	Learning Objectives for Course Outcome 4
4. Describe the Systems Analysis Phase and Requirements Modeling	4.1 Describe systems analysis phase activities 4.2 Explain joint application development (JAD), rapid application development (RAD), and agile methods 4.3 Use a functional decomposition diagram (FDD) to model business functions and processes 4.4 Describe the Unified Modeling Language (UML) and examples of UML diagrams 4.5 List and describe system requirements, including outputs, inputs, processes, performance, and controls 4.6 Explain the concept of scalability 4.7 Use fact-finding techniques, including interviews, documentation review, observation, questionnaires, sampling, and research 4.8 Define total cost of ownership (TCO) 4.9 Conduct a successful interview 4.10 Develop effective documentation methods to use during systems development
Course Outcome 5	Learning Objectives for Course Outcome 5
5. Describe the Data and Process Modeling Phase	5.1 Describe data and process modeling concepts and tools, including data flow diagrams, a data dictionary, and process

SAULT COLLEGE | 443 NORTHERN AVENUE | SAULT STE. MARIE, ON P6B 4J3, CANADA | 705-759-2554

CSD202: SYSTEMS ANALYSIS AND DESIGN

	descriptions 5.2 Describe the symbols used in data flow diagrams and explain the rules for their use 5.3 Draw data flow diagrams in a sequence, from general to specific 5.4 Explain how to level and balance a set of data flow diagrams 5.5 Describe how a data dictionary is used and what it contains 5.6 Use process description tools, including structured English, decision tables, and decision trees 5.7 Describe the relationship between logical and physical models	
Course Outcome 6	Learning Objectives for Course Outcome 6	
6. Explore fundamental concepts of Object Modeling	6.1 Explain how object-oriented analysis can be used to describe an information system 6.2 Define object modeling terms and concepts, including objects, attributes, methods, messages, classes, and instances 6.3 Explain relationships among objects and the concept of inheritance 6.4 Draw an object relationship diagram 6.5 Describe Unified Modeling Language (UML) tools and techniques, including use cases, use case diagrams, class diagrams, sequence diagrams, state transition diagrams, and activity diagrams 6.6 Explain the advantages of using CASE tools in developing the object model 6.7 Explain how to organize an object model	
Course Outcome 7	Learning Objectives for Course Outcome 7	
7. Apply Software Development Strategies	7.1 Describe the concept of Software as a Service 7.2 Define Web 2.0 and cloud computing 7.3 Explain software acquisition alternatives, including traditional and Web-based software development strategies 7.4 Describe software outsourcing options, including offshore outsourcing and the role of service providers 7.5 Explain advantages and disadvantages of in-house software development 7.6 Discuss cost-benefit analysis and financial analysis tools 7.7 Describe a request for proposal (RFP) and a request for quotation (RFQ) 7.8 Describe the system requirements document 7.9 Explain the transition from systems analysis to systems design	
	quotation (RFQ) 7.8 Describe the system requirements document	
Course Outcome 8	quotation (RFQ) 7.8 Describe the system requirements document 7.9 Explain the transition from systems analysis to systems
