| Course Description:                                                                                 | This course is designed to provide students with the importance of Computer numerical control machines in a manufacturing environment. Students will combine classroom knowledge and apply what has been learned on actual CNC Milling machines. Students will work in both conversational and normal G code programming to write programs and perform edits as required. Safety in the Shop and the equipment will be strictly followed. |  |  |
| Total Credits:                                                                                      | 5                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |
| Hours/Week:                                                                                         | 5                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |

In response to public health requirements pertaining to the COVID19 pandemic, course delivery and assessment traditionally delivered in-class, may occur remotely either in whole or in part in the 2020-2021 academic year.

Controlled machines.

2.2 Identify the components of a CNC milling machine.

and the right-hand rule for axis identification

2.3 Understand and explain the Cartesian coordinate system

AMF204 : COMPUTER NUMERICAL CONTROL MACHINING II Page 2

| Course Outcome 3                                                                 | Learning Objectives for Course Outcome 3                                            |
|----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| 3. Explain the limitations of a CNC milling machine in regards to manufacturing. | 3.1 Identify the various operations that can be performed on a CNC milling machine. |
|                                                                                  | 3.2 Identify work holding methods                                                   |
|                                                                                  | 3.3 Identify specific tools used to perform specific operations.                    |
|                                                                                  | 3.4 - Identify order of operations needed to manufacture a part.                    |
| Course Outcome 4                                                                 | Learning Objectives for Course Outcome 4                                            |
| 4. Perform selection of material and determine whether ferrous or non-ferrous    | 4.1 Identify the materials being used.                                              |
|                                                                                  | 4.2 Determine the best material selection to perform part manufacture.              |
|                                                                                  | 4.3 Describe the characteristics of the material                                    |
|                                                                                  | 4.4 Identify alternate materials that could be used and why.                        |
| Course Outcome 5                                                                 | Learning Objectives for Course Outcome 5                                            |
| 5. Perform selection of cutting tools to perform                                 | 5.1 Identify the various tooling and how they are designed to cut.                  |
| various operations.                                                              | 5.2 Identify high speed tooling and describe why they are used.                     |
|                                                                                  | 5.3 Describe the purpose of the insert on the tool.                                 |
|                                                                                  | 5.4 Identify the correct setup of the tool to perform the required operation.       |
| Course Outcome 6                                                                 | Learning Objectives for Course Outcome 6                                            |
| 6. Perform operation of the                                                      | 6.1 Perform initial startup and orientation of milling machine.                     |
| Tormach Path Pilot controller.                                                   | 6.2 Perform basic programming functions in conversational.                          |
|                                                                                  | 6.3 Select proper tooling and orientation in the controller.                        |
|                                                                                  | 6.4 Understand tool setup in relation to axis and start points.                     |
|                                                                                  | 6.5 Perform manual movements to set tool locations.                                 |
|                                                                                  | 6.6 Understand offsets and how they relate to the tool.                             |

## **Evaluation Process and Grading System:**

| Evaluation Type                        | <b>Evaluation Weight</b> |
|----------------------------------------|--------------------------|
| Assignments & Labs                     | 25%                      |
| Attendance, Attitude and Participation | 10%                      |
| Lab Practical Test                     | 20%                      |
| Written Test #1                        | 15%                      |
| Written Test #2                        | 15%                      |
| Written Test #3                        | 15%                      |

In response to public health requirements pertaining to the COVID19 pandemic, course delivery and assessment traditionally delivered in-class, may occur remotely either in whole or in part in the 2020-2021 academic year.

SAULT COLLEGE | 443 NORTHERN AVENUE | SAULT STE. MARIE, ON P6B 4J3, CANADA | 705-759-2554

| Date:     | March 8, 2021                                                                                          |
