Course Outline

Philosophy

Part I

This course is designed to build in the student a growing understanding of the development of the child from birth through the preschool years. The application of this knowledge in the field will enable her to work more effectively with young children.

Part II

Goals

- to provide the student with theoretical knowledge of the principles of growth and development in the preschool child.
- to develop suitable methods of reviewing current research studies in the area
- to develop skills in assessing individual development and thus provide a basis of stimulating optimum development of the child through preschool settings.

Part III

Terminal/behavioural objectives

1. To have developed knowledge in theories of child growth and development.
2. To have developed an understanding of the processes of growth and development in the child.
3. To have developed an awareness of research studies and an ability to review these for information and new ideas.
4. To have developed an understanding of the contribution of research to knowledge in the field of child development.
5. To have developed an understanding of the individual child and be able to apply this to the overall pattern of growth and development.
6. To have acquired skills in assessing individual development in the child.
7. To have developed knowledge in methods of stimulating optimum growth and development in the child.

Part IV
