

COURSE OUTLINE

BIO181

Prepared: Julie Freestone Approved: Bob Chapman

Course Code: Title	BIO181: BIOLOGY II FOR PCD
Program Number: Name	3060: PRE-HEALTH CERT DIPL
Department:	PRE-HEALTH
Semester/Term:	18W
Course Description:	This course will continue to introduce the student to the basic concepts of biology, both general and human. The course follows topics introduced in Bio I PHS PCD with a review of the organization of the body into cells, tissues and organ systems. Topics include the anatomy and physiology of the following human organ systems: cardiovascular, respiratory, digestive, urinary, integumentary, lymphatic and immune. In addition, there will be an introduction to infectious organisms. By the end of the course, students will have an appreciation for the complexity of the human body and its functions.
Total Credits:	4
Hours/Week:	4
Total Hours:	60
Prerequisites:	BIO180
Vocational Learning Outcomes (VLO's): Please refer to program web page for a complete listing of program outcomes where applicable.	#1. Examine fundamental biological concepts, processes and systems of the human body, including the structure, function and properties of the molecules of life, cells, tissues and organ systems in relation to homeostasis and health.
Essential Employability Skills (EES):	#4. Apply a systematic approach to solve problems. #5. Use a variety of thinking skills to anticipate and solve problems. #6. Locate, select, organize, and document information using appropriate technology and information systems. #8. Show respect for the diverse opinions, values, belief systems, and contributions of others. #10. Manage the use of time and other resources to complete projects. #11. Take responsibility for ones own actions, decisions, and consequences.
Course Evaluation:	Passing Grade: 50%,

Grading System:	Evaluation Type	Evaluation Weight
	Final Exam	20%
	Mid-term Exam	20%
	Unit Tests	60%

Books and Required Resources: Human Biology, Anatomy & Physiology for the Health Sciences by Roscoe, Wendi A
 Publisher: Nelson
 ISBN: 9780176507176

Course Outcomes and Learning Objectives:

Course Outcome 1.

1. Identify the major components and physiology of the cardiovascular and the respiratory systems.

Learning Objectives 1.

- List the functions of the cardiovascular system.
- Describe cardiac muscle tissue.
- Identify the anatomy of the heart (chambers, valves, blood vessels etc...).
- Trace the flow of blood through the heart, pulmonary and systemic circuits.
- Identify the major blood vessels of the heart (aorta, IVC, SVC, coronary arteries, coronary veins).
 - Describe the general structure of blood vessels (arteries, arterioles, veins, venules and capillaries).
 - Identify components of blood.
- List the functions of the respiratory system.
- Locate and identify the main structures of the respiratory system.
- Define pulmonary ventilation, internal and external respiration.
- Describe the process of breathing (involvement of ribcage and diaphragm, application of Boyle's Law).
 - Differentiate among various respiratory volumes (vital capacity, tidal volume, inspiratory and expiratory reserve, etc.).

Course Outcome 2.

2. Identify the major components and physiology of the digestive and urinary systems.

COURSE OUTLINE

BIO181

3

Prepared: Julie Freestone Approved: Bob Chapman

Learning Objectives 2.

- List the functions of the digestive tract.
- Identify the primary and accessory organs of the digestive system and list their general functions.
- List the functions of the urinary system.
- Identify and describe the main function of the structures of the urinary system.
- Describe the structure of a kidney.
- Describe the formation of urine in the nephron.
- Explain the role of the urinary system in maintaining blood pH.

Course Outcome 3.

3. Identify the major components and physiology of the integumentary, lymphatic and immune systems.

Learning Objectives 3.

- List the functions of skin.
- Describe the general structure of skin (layers, appendages).
- List the functions of the lymphatic system.
- Identify the structures of the lymphatic system and describe the main function of each.
- Describe lymph and its role in immunity.
- Distinguish among various types of leukocytes and describe their role in immunity.
- Describe innate, non-specific immune responses (fever, inflammation, interferon, prostaglandins, etc.).

Course Outcome 4.

4. Distinguish among various types of infectious agents and describe how each infects the body

Learning Objectives 4.

- Describe the normal flora of the human body and their importance.

COURSE OUTLINE

BIO181

4

Prepared: Julie Freestone Approved: Bob Chapman

- Distinguish among infectious agents: bacteria, viruses, fungi and parasites, and briefly discuss their effects on the human body.

Course Outcome 5.

5. Identify the major components and physiology of the reproductive systems.

Learning Objectives 5.

- Identify male reproductive organs and list their functions.
- Identify female reproductive organs and list their functions.

Date:

Wednesday, August 30, 2017

Please refer to the course outline addendum on the Learning Management System for further information.
