Course Description:	This first level mathematics course for engineering technology programs begins with a review of fundamental concepts including arithmetic operations, ratios, proportions and variation, and concepts in measurement. This is followed by several algebra topics including linear equations, factoring, fractions, quadratic equations and exponential and logarithmic functions. A treatment of trigonometry of right triangles is also included. The goals of this course are, first, to show that mathematics does play a most important role in the development and understanding of the various fields of technology and, secondly, to ensure that students acquire the mathematical and critical thinking skills necessary to analyze and solve engineering technology problems.
